

NED 2024

SPRING FORWARD: Strengthening Skills and Engaging with Colleagues

ITHS | Institute of Translational Health Sciences
ACCELERATING RESEARCH. IMPROVING HEALTH.

THE PROTOCOL REVIEW:

HOW TO READ FOR BOTH THE BIG PICTURE AND YOUR RESPONSIBILITIES IN IMPLEMENTING A STUDY

Amy B. Good, PhD
Clinical Research Manager
Department of Neurology
University of Washington

NED 2024

ITHS | Institute of Translational Health Sciences
ACCELERATING RESEARCH. IMPROVING HEALTH.

Poll 1 - How many year's experience do you have in research?

0-2 years

2-5 years

5-8 years

8-12 years

12+ years

Poll 2 - Where is the location of the institution you represent?

Alaska

Idaho

Montana

Washington (outside Puget Sound / Seattle)

Washington (inside Puget Sound / Seattle)

Wyoming

Outside of the WWAMI Region

Outside of the United States

Poll 3 - Which of the following roles/activities are you involved with as part of your current job? (Select all that apply)

Research coordination/management	0
Research study recruitment/enrollment	0
Research nurse or physician	0
Data coordination	0
Data analysis	0
Administration/Management	0
Epidemiology/Statistics	0
Laboratory	0
Research study promotion/marketing/social media	0

SEE MORE 

Learning Objectives

By the end of the session, you will be able to:

- Describe your role as the liaison between the study and the public
- Discuss which components of the protocol are most relevant for study execution by study staff
- Identify components in the protocol that facilitate the creation of study checklists

Protocols

- Industry vs grant funded protocols
- For today, focus is on time of implementation; start-up and approvals are completed

Protocols

Why is the protocol important?

- Road map, source of information for study execution.
- The big picture: you are the liaison between the study team and the participants, and between the study and the public.

The Why of the Protocol

2. BACKGROUND INFORMATION AND SCIENTIFIC RATIONALE

3. OBJECTIVES/STUDY AIMS

- Primary objective
 - The primary objective of this study is to evaluate the effect of a dietary supplement, given as an oral tablet, on muscle energetics as measured by a muscle fatigue test in elderly subjects.
- Secondary objective
 - The secondary objectives of the study are to assess the safety and tolerability of a single oral dose of the supplement in elderly subjects.

Assessment specifics

- Familiarize yourself with these
- Can you experience the assessments yourself?
 - Diaries
 - Questionnaires
 - 6-minute walk test
 - Neurocognitive assessments
 - Procedures: can you observe?

APPENDIX 1 - Schedule of Events

Parameters	Screening	Baseline Visit 1 ^a	Visit 2 (Day 21)	Visit 3 (Day 60)
Informed consent	X			
Pulmonary Function Tests	X			X
6 minute walk test	X			X
Inclusion and exclusion criteria	X			
Medical history	X			
Physical examination	X			X
Height and Weight	X			X
Laboratory – CBC, chemistry panel	X			X
Laboratory – serum biomarkers ^b		X	X	X
Laboratory – PK collection		X		X
ECG	X			X
Vital Signs ^c	X	X	X	X
Study Product Dispensed		X	X	
Peak Flow Meter ^d	X	X	X	X
Review Exercise Diary		X	X	X
Quality of Life Questionnaires		X		X
Concomitant Medications	X	X	X	X
Adverse Events		X	X	X

^a Should occur no more than 14 days after screening visit

^b Participant should be fasting

^c To include heart rate, blood pressure, temperature, and respiratory rate

^d Peak flow meter dispensed at screening visit for home use; reviewed at study visits

The When, What, and Where

Labs and specimen processing

- Lab medicine vs research testing service (RTS)
- Watch out for aggregate labs
 - Comprehensive metabolic panel

Appendices

13. APPENDICES

- Schedule of events
 - Footnotes!
- Lab manual
 - Processing times

1. SAM-E PLASMA PHARMACOKINETICS SAMPLE PREPARATION

SAM-E PK Plasma Samples	
Blood Volume	4mL
Anticoagulant	EDTA
Blood Collection Times	Per the Protocol: Baseline and at: 2, 6, and 10 hrs post-drug ingestion.
Processing of Samples	Process all blood samples within 30 minutes of collection. All blood samples are to be kept on crushed ice (do not use chilling blocks or allow to freeze) until centrifuged.
Centrifuge	Sample should be centrifuged at 2000 x g for 15 minutes in a refrigerated centrifuge (4°C).

PK Plasma Sample Shipping Instructions (QPS Lab):

Note: Aliquot 1 and Aliquot 2 of each sample set at each time point should be sent separately frozen on dry ice. Please send Aliquot 1 first. Once shipment receipt acknowledgement from ABC lab is received, then Aliquot 2 may be shipped.

!! DO NOT SHIP ON A FRIDAY!!

2. SAM-E SERUM OXIDATIVE STRESS BIOMARKERS SAMPLE PREPARATION

Blood Volume	5mL
Tube	Serum Separator (RedTop) Tube
Blood Collection Times	Per the Protocol: Baseline and at: 2, 6, and 10 hrs Post-drug ingestion.
Processing of Samples	Allow samples to clot for two hours at room temperature.
Centrifuge	Sample should be centrifuged for 20 minutes at approximately 1000 x g.
Storage Tubes	3 mL polypropylene tubes with screw caps.
Samples after Separation	2-3mL of serum should be placed in to serum storage tube.
Storage	Once placed in the serum storage tube, the samples should be stored at -20°C or -80°C upright until shipped. Avoid repeated freeze/thaw cycles.

Participant Visits

What, who, when, and where?

Mental run-through; think it through.

Where do you start?

- Checklists
- Participant binders
- Equipment, questionnaires, study assessments

Participant Visits

Traveling kit

- Checklists
- Protocol
- Schedule of events
- Extra consent forms
- Post-its and pens
- Assessments/questionnaires
- Lab manual

Questions For You

Poll 4 - What section of the protocol is most important for research coordinators? (Select all that apply)

Background information and scientific rationale

0

Study design

0

Biostatistics

0

Participant selection

0

Visit schedule and assessments

0

Assessment of safety

0

Appendices

0

Poll 5 - Do you need to know the background/science of the study?

Yes

No

Poll 6 - How does a research coordinator's knowledge of the background/science of the study help the trial?

- A. Helps with job satisfaction 0%
- B. Helps engage study participants 0%
- C. Adds value to the study team 0%
- D. A and B 0%
- E. B and C 0%
- F. All of the above 0%

Poll 7 - How important are protocol appendices?

Not very. The most important information is in the protocol itself.

0%

Somewhat. Sometimes there is good information in there.

0%

Extremely. Critical information is often found in appendices.

0%

Poll 8 - Please refer to the schedule of events. How do the footnotes impact the study visit for the participant?

The footnotes have no impact on the study visit.

0%

Baseline visit should occur up to 30 days after screening visit.

0%

Patients should have biomarker labs drawn at the end of the visit.

0%

Patients should have biomarker labs drawn as early as possible during the visit.

0%

Poll 9 - Please refer to the laboratory manual. The PK Plasma samples and the Biomarker Plasma samples can be handled/processed the same way.

True

False

Poll 10 - The research coordinator has the most availability to work on shipping specimens on Fridays. She/he/they should plan to schedule most shipments on Fridays.

True

False

Poll 11 - Because the research coordinator's time to ship specimens is limited, she/he/they should take advantage of the time available and ship all specimens at once.

True

False

Poll 12 - When creating study visit checklists, the coordinator should be sure to begin with the day of the screening visit.

True

0%

False

0%

Learning Objectives

By the end of the session, you will be able to:

- Describe your role as the liaison between the study and the public
- Discuss which components of the protocol are most relevant for study execution by study staff
- Identify components in the protocol that facilitate the creation of study checklists

Questions?

THANK YOU!

REMINDERS 1-2 DAYS BEFORE VISIT

- Call to subject:
 - Please bring in all meds
 - Questions re: mailing?
 - Eat breakfast or fast depending upon visit**
- Subject binder: Tag places for PI signature
- Lab slips and orders signed by PI
- Lab Requisition slips completed (subj name, DOB, U number)
- All orders completed for TRU nursing unit (Subj. name, DOB, U number on forms) & highlighted for visit
- Reminders to PIs (and IDS on Visit 2) about subject schedule
- Who will walk subject from TRU to imaging lab

VISIT 1 -- Screening Day

- **Be sure to have:**

- Subject binder
- Traveling kit
- ID Badges
- Subject phone screen
- Copier code: 123456
- Note re: subject reimbursement info
 - SSN
 - Address
- Snack for subject

The How of the Protocol

4. STUDY DESIGN

It's a rather interesting phenomenon. Every time I press this lever, that post-graduate student breathes a sigh of relief.

Data Management and Biostatistics
